Allowable Subject Matter

The allowable subject matter indicated in the office action dated March 11, 2009 is hereby withdrawn. The following new rejection is applicable:

Information Disclosure Statement

The information disclosure statement filed April 22, 2009 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. The examiner notes the post card accompanying the IDS. However, the card indicates that "0" references accompanied the submission. The US references have been considered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 3-6 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by US 3,411,888 to Drost et al.

The instantly claimed invention is directed to a zeolite composition comprising a zeolite A, X and/or Y and/or chabazite in combination with clinoptilolite.

Drost et al. disclose a composition and method for the production and use thereof that anticipates the instantly claimed invention. The reference teaches a powder

or agglomerated zeolitic composition comprising a chabazite zeolite and a clinoptilolite with particle size consistent with that claimed in the application. The composition is prepared by mixing the zeolites together followed by agglomerating, drying and activation.

This disclosure anticipates the instantly claimed invention. See particularly columns 3, 5 and 6.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was

not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 2 and 7-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 3,411,888 to Drost et al.

Drost et al. teaches the invention as set forth above. Drost et al. differ from claim 2 in that the specific amounts of zeolites are not recited. The examiner takes the position that the skilled artisan would have been able to arrive at such amounts within the broad disclosure of Drost et al. because they would be result-effective for the adsorbent process for which the composition will be employed.

Claims 7-11 describe methods for the removal of water from various liquid or gaseous mixtures. Drost et al. teach using the composition for adsorbing water from a mixture. Accordingly, the skilled artisan would expect the composition to have utility in the separation processes set forth in the instant application.

Conclusion

Applicants are advised that any evidence to be provided under 37 CFR 1.131 or 1.132 and any amendments to the claims and specification should be submitted prior to final rejection to be considered timely. It is anticipated that the next office action will be a final rejection.
